Safety Bulletin

EL/EHS/SafetyBulletin/006 03 July 2018

Learning Points:

03 fatal cases in a month due to failure to conduct a workplace Risk Assessment.

i) “Compromising Risk” and complacent to daily routine (which may not be the safe practice) attitude is the key to a FATAL accident;

ii) In executing your work at site, always ask yourself “what if” I do this, “what will happen next”. Visualized the sequences of consequences in your mind to detect any hazard arises that can endanger you & others safety.

iii) When there is a Safety Procedure to operate a machine or equipment by the supplier, STRICTLY COMPLY TO IT.

Equipment Safety

A typical complacent attitude that assumed the unguarded rotating part of Portable Generator will not hurt anyone!!!

“Everyone of us deserve the right to return back home SAFE to see our love ones in a good healthy body irregardless which workplace we are from”
