Everyone of us deserve the right to return back home SAFE to see our love ones in a good healthy body
irregardless which workplace we are from.

Learning Points:

Though we are not engaged in roof work, we do have concrete casting over big drain where scaffold decking is used as a standing and working platform. Or others mean of working platform laid over trenches or excavation where worker may fall to depth.

Thus, it is important that

i) Qualify scaffold team is deployed and tasked to erect the said working platform;

ii) Scaffold Supervisor to access the work location and proposed the appropriate working platform to be used.

iii) Scaffold erectors to physically check every scaffold material before put them into used.

iv) Defective scaffold materials to be reported, identified and placed at a designated area while waiting to return to store for further action.

Work Platform Safety
